

BOSTON PRO

Basket stretcher with spinal board

Spencer Boston Pro basket stretchers are intended for the recovery and transport of patients. They can be used for rescue operations in those cases where it is necessary to protect patients from side impacts, where it is not possible to intervene with normal transport equipment. The devices can be hoisted with lifting systems applied to fixed anchors, in all cases keeping the stretcher in a horizontal position with respect to the ground, and only if equipped with a Spencer harnessing system. It is not foreseen that the patient be able to intervene on the devices.

Specific features

The aluminum structure makes it particularly robust, resistant and reduces the weight

The shape of the frame provides a firm grip to the operators together with a wide choice of grip points

The removable spinal board makes it very versatile in rescue operations

Accessories
